Firefox Setting Guide

1. **Proxy Setup.**
   Turn on your proxy with a port number on your local machine.

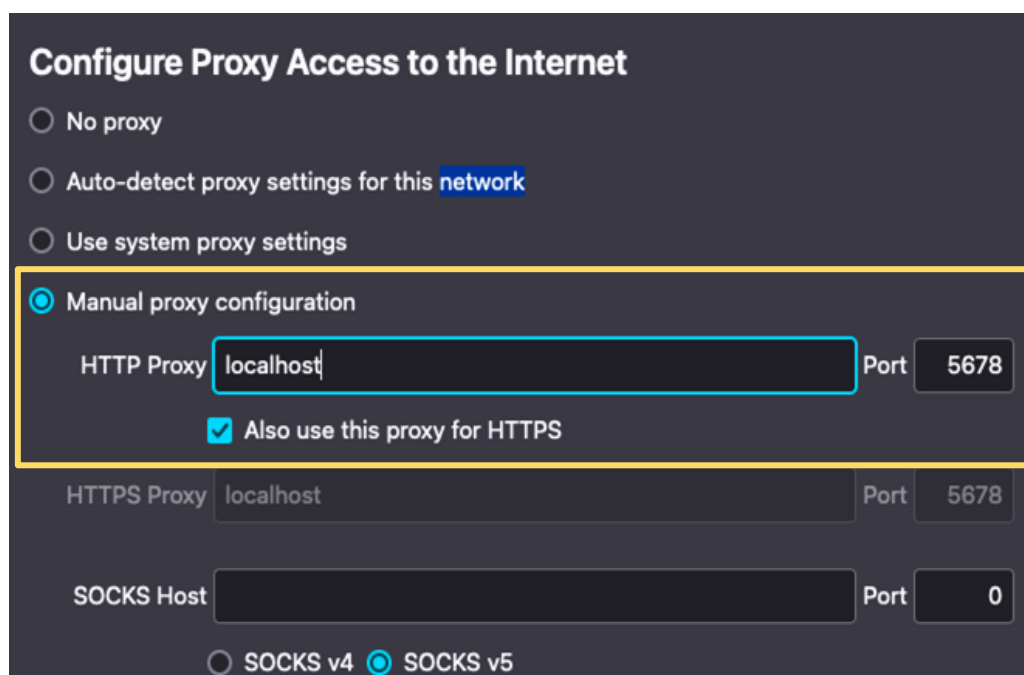

2. **Browser Setup.**
   (a) Turn on Firefox and select "Settings" from the menu.

(b) Navigate to "Network Settings" in the "General" tab.
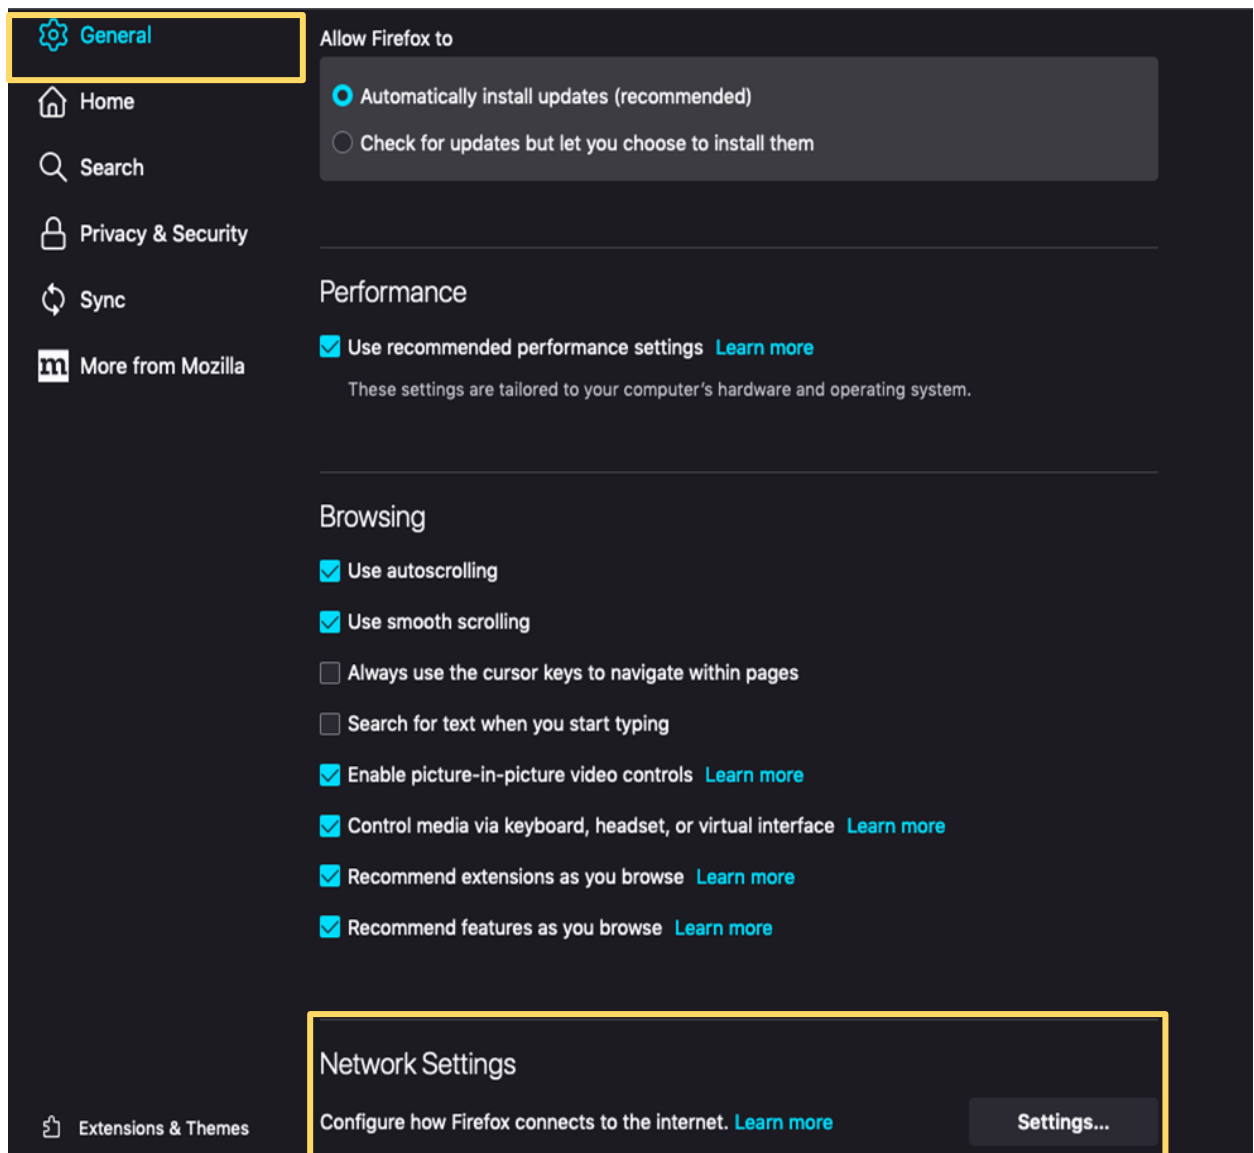

(c) Select "Manual Proxy Configuration" from the options available.
In the boxes, enter the host IP address(localhost) and port where the proxy program is running.
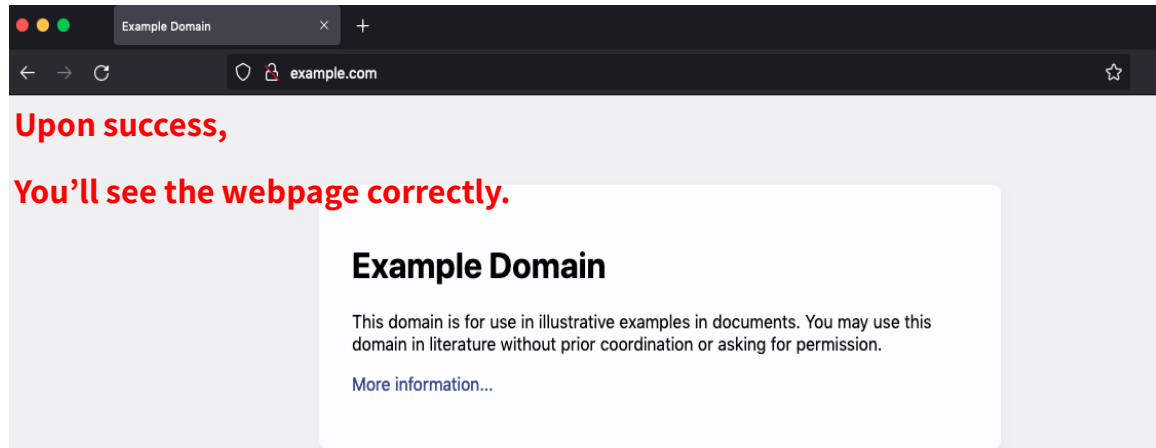

(d) Type about:config in the address bar.
Search for "network.http.proxy.version" and set it to 1.0

3. Make a request.

Test with http://example.com/
If successful: The page loads and shows **"Example Domain"**.

If unsuccessful: The browser may keep buffering, or you may see an error like **"The proxy server is refusing connections."**
You should also be able to see the failure page when the proxy is turned off.
